

DevOps Mobilisation Workshops

Duration: 1 Day

Various industry analysts are predicting a wave of DevOps adoption in the enterprise in 2016 -17. Why? Because DevOps, unlike many other framework initiatives, is linked to measurable business improvement. DevOps initiatives are delivering amazing productivity, agility and service reliability improvements.

These benefits are not restricted to the “unicorns” of the industry, Facebook, Amazon, Netflix et al. Traditional Enterprises are getting these benefits already but it does take insight and preparation to prevent any false starts.

The DevOps Mobilisation Workshop is all about accelerating your DevOps initiative and ensuring that it scales to deliver sustainable value.

This workshop is in two parts:

Part One: Defining the “Why & What” of DevOps to ensure a common understanding in your team

Part Two: Deciding “How” - Your business goals and how to get started

Part 1: The *Why and What*

We will look at the business drivers, and the various upstream frameworks including Lean Startup and Agile that drive the need for DevOps.

We will then help define DevOps and place it in the context of Enterprise IT and the overall IT Operating Model.

Topics in the first half day include:

- State of play in the world of our traditional IT management and governance frameworks
- Disruptive forces and the need for change
- DevOps practices:
 - 1st Way: The flow of Work
 - 2nd Way: Amplifying and acting on feedback
 - 3rd Way: Continuous Experimentation and Learning
- DevOps Toolchain considerations
- Where DevOps fits in the IT function and structural options
- Creating a culture where DevOps will thrive

Part 2: How to get started on your initiative

The big question is "how"? The good news is that best practices are emerging from leading IT Enterprise shops that have already adapted due to business drivers and cultural receptiveness.

The mobilisation session (half day) will cover:

- Your expectations of DevOps
- The business goals
- Agreeing on where you are now
- Identifying the services/apps as candidates for DevOps
- Choosing the right team
- What Toolchain investments are required to meet your objectives
- Supporting the DevOps initiative
- Scaling DevOps
- Next steps

This workshop is available for in-house presentation only.
